

# Ringtail™

Infinite power.  
Unlimited discovery.

Meet the next member of your legal team.

Say hello to Ringtail 8. Powerful enough to catch every detail. Flexible enough to handle all of your e-discovery and document review needs—large or small. And now, with a new look, it's easier than ever to use.

## Power, from processing through to production

### Reduce e-discovery risks and costs.

Ringtail 8 is a single home for all of your e-discovery projects—simplifying project management, maximising productivity and delivering standout review and analysis software to your legal team. Based on more than 15 years of innovation, Ringtail 8 provides best-in-class capabilities to handle a broad range of critical e-discovery and document review challenges, including:

- Data analysis and early case assessment
- Internal and regulatory investigations, including second requests
- Class action and multi-district litigation

No other review platform provides the scale, flexibility and powerful analytics of Ringtail 8. With integrated data processing, search, review, analysis and production, your team spends less time managing risky data handoffs between disparate tools and vendors. Whether Ringtail is deployed on-premise or as a service, its unmatched scale and performance give you the confidence to handle the global requirements of even your largest and most complex projects.

## Flexible workflows and fewer limitations

### Review and produce your way.

Ringtail 8 is a comprehensive, easy-to-use solution that shines in the day-to-day and scales when big litigation strikes. Ringtail's powerful workflow automation tools give your team increased control of every project and better insight into review management. Automate and audit complex, multi-stage review strategies to keep pace with project deadlines and review volumes. And Ringtail's flexible production format and branding options, as well as its comprehensive audit, search and version tracking capabilities, give you the confidence to fulfill even the most demanding production requirements.

## Scalable and secure at every step

### Collaborate with confidence.

Ringtail's object-level security architecture provides complete control of the review environment for secure multi-party collaboration. Administrators can easily manage access to documents and functionality such as redactions, tagging or annotations. And Ringtail is built to be able to scale to the demands and requirements of large cases. Unlike other products that ask you to make trade-offs that impact review productivity when data volumes increase, Ringtail is ready when your small project suddenly increases in scope and size. That's why Ringtail is so commonly selected to handle the largest and most complex e-discovery project demands.

# Increase review productivity.

## Search

The robust advanced search capabilities of Ringtail enable legal teams to survey the entire case, allowing for quick and complete investigations, examinations and strategic evaluations at any stage of the process.

- Cross reference search-term hits to dates, custodians and other project metadata.
- Build, test and run advanced searches easily via the drag-and-drop search wizard.
- Search across the entire project with no need to run duplicative searches and merge results.

## Analyse

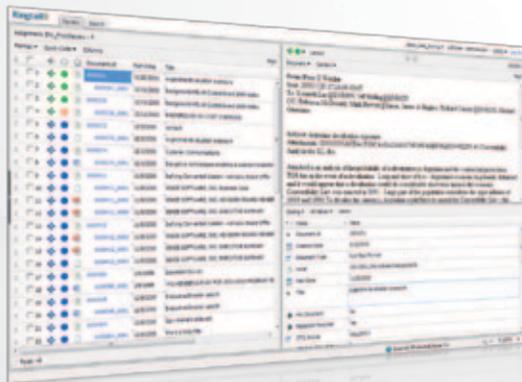

Ringtail Analytics combines data, document and content analytics with visual review tools that dramatically increase review team productivity and efficiency.

- Spend less time searching and more time understanding and coding documents.
- Cluster documents based on concepts and route “like” documents to subject matter experts.
- Explore documents based on similarity, timelines and document metadata.
- Quickly validate search term quality and review, sort and filter all terms against dates and custodians.

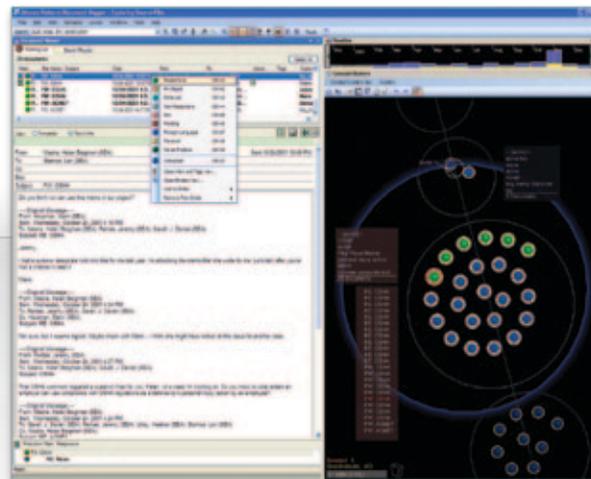

## Review

Reviewers can quickly and accurately analyse, review and categorise electronic information. Ringtail 8's configurable interface allows reviewers to optimise their working environment and maximise their review throughput.

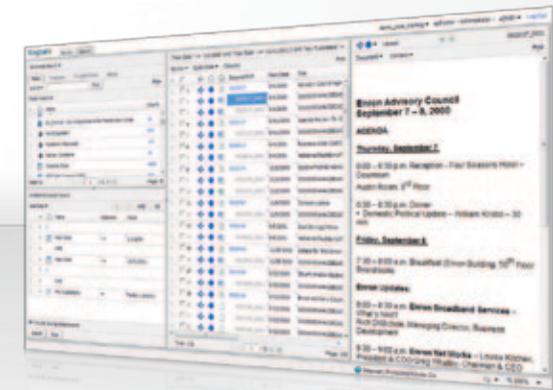

- Power through assignments using linear or visual methods.
- New “Find Similar” improves coding confidence and decision rates.
- Quickly identify and bulk code similar documents.
- Review and produce foreign language documents.
- Redact documents using multiple colours and annotations.

Ringtail handles cases and projects of all sizes, from a small investigation to complex, multi-district litigation.

Many solutions can find obvious keyword hits. Ringtail 8 goes deeper to uncover the less obvious connections that search-only solutions often miss.

The new Ringtail 8 user interface provides dramatic efficiency gains to both repetitive review tasks and its core search capabilities.
